

OTICON | More

At Accent on Hearing, we work hard to earn your trust every day and part of our job is to stay up to date on advancements in hearing aid technology. Science shows we hear with our brains and not our ears. Oticon just introduced a brand-new hearing device that gives the brain more of what it needs to make better sense of sound, so you can get more out of life. As we mentioned, Oticon More™ hearing devices were developed to work more like how your brain works, because they learned through experience.

What's Inside

Oticon MORE

It's a Baby Shower

Employee of the Month
(well, kind of)

May is "Better Hearing
& Speech Month"

Our Staff

Joanne LaPorta, MA, CCC-A

Elizabeth Martinez, Au.D.

Irena Homesher, Practice Manager

Shannon Miller, Audiology Assistant

This is because Oticon More has the world's first Deep Neural Network embedded on the chip. As a result, Oticon More:

- Delivers 30% more sound to the brain*
- Increases speech understanding by 15%*
- Reduces listening effort so that you remember more of what is being said

With these new devices you can easily connect to your TV and can catch a sporting event, show or movie with your friends and family again. The rechargeable battery lasts all day** so you can enjoy direct streaming from iPhone, iPad and Android devices. Regaining everyday things like talking on the phone or listening to music make a big impact on your quality of life. Since technology changes so rapidly these days, your current hearing aids may not be able to provide all the support you need. We are happy to answer any questions you may have about this latest hearing solution.

Call us at 303-663-2235 to schedule a live-listening demonstration along with a RISK-FREE trial.

We are excited to demonstrate how this new technology can enable you to get the most out of life!

***Lithium-ion performance varies depending on hearing loss, lifestyle and streaming behavior.

It's a Baby Shower

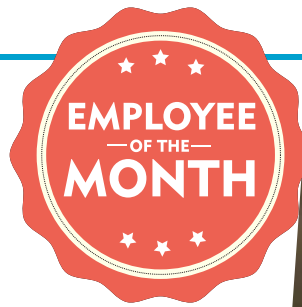

Thank you to all who sent in words of advice, books, and bibs. Our little baby shower was a huge success with the mother-to-be and she was utterly humbled at how many of you helped make her day so special.

See the photos for yourselves...

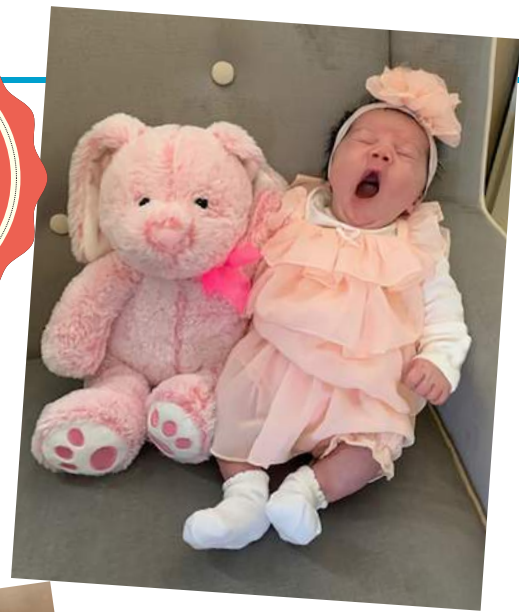

Luna Rae Brubaker!

At 6 pounds, 2 ounces Luna was welcomed by mom and dad, Dr. Liz and Nick on March 15th in typical Colorado style...during a blizzard.

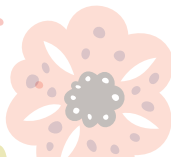

(well, kind of)

So far we have learned that Luna likes car rides, taking naps, and smiling!

Luna does not care for loud sounds or changing her clothes, and she'll be sure to let you know it! She also hates being cold, so getting out of the tub is always followed by measurable tears.

As you can see for yourselves, Luna has grown a bunch in the last six weeks. A few words from Dr. Martinez and Nick: "Mom & Dad love her so much! We are learning so much from her. We love to hold her, sing to her, and sometimes we find ourselves just staring at her in awe that we have such a beautiful baby girl."

MAY IS BETTER HEARING AND SPEECH MONTH

During the month of May, the audiology world makes every effort to promote community awareness regarding hearing loss, communication, and tinnitus and how some of these conditions of these can affect your daily life. More importantly, as audiologists we like to highlight how treating hearing loss and tinnitus can vastly improve your communication and therefore your lifestyle, relationships, and even work situations.

The Accent on Hearing Team would like to remind everyone to treat your hearing loss or tinnitus, that now is the ideal time. And if you have friends or family with hearing difficulties, now is the time to encourage them to get a comprehensive evaluation.
